SUMMARY

Computer Engineering student with strong programming fundamentals and hands-on experience in full-stack web development, automation, and AI-based platforms. Interested in backend development and ML-powered systems, with a focus on building scalable, user-centric applications.

EDUCATION

- B.E. in Computer Engineering**, SCTR's Pune Institute of Computer Technology 2024 – Present
CGPA: 9.11
- Diploma in Computer Science**, Cusrow Wadia Institute of Technology, Pune 2021 – 2024
Percentage: 96.24%
- Secondary Education**, GLKV, Latur 2018 – 2021
Percentage: 100%

TECHNICAL SKILLS

- Languages:** C, C++, Python, Java, PHP, JavaScript
- Web:** HTML, CSS, Bootstrap, React.js
- Databases:** SQL, MySQL
- Tools & Platforms:** Git, GitHub, XAMPP, VS Code
- Concepts:** Data Structures & Algorithms, OOP, REST APIs, API Integration
- Soft Skills:** Problem Solving, Communication, Team Collaboration, Adaptability, Time Management

WORK EXPERIENCE

- Anantadi Tech Pvt. Ltd.** — Full Stack Development Intern Jan 2026 – Mar 2026
Contributed to developing a Habit Tracking and Personal Development application. Worked on frontend development, feature implementation, testing, debugging, and enhancing the application's responsiveness and user experience while collaborating with the development team.

PROJECTS

- Habit Tracking & Personal Development Application**
Developed a web application to help users track daily habits, manage goals, monitor progress, and improve productivity. Contributed to frontend development, feature implementation, testing, debugging, and UI enhancements to provide a responsive and user-friendly experience.
- Food Reach – Surplus Food Donation Platform**
Full-stack web application connecting donors, NGOs, and volunteers to distribute surplus food. Implemented donor listings, NGO request matching, volunteer workflows, and basic impact dashboards using HTML, CSS, JavaScript, PHP, and MySQL.
- Retail Demand Forecasting & Price Simulator**
Built a regression-based model using Python and Scikit-learn to forecast product demand from historical sales data. Developed a price-impact simulator to visualize revenue changes under different pricing strategies; work published as a research paper.
- No-Code AI Model Training Platform** — Runner-Up, GeekVishwa 2025
Designed and developed the front-end interface for a no-code ML training platform featuring drag-and-drop workflows, model selection, and training visualization to help beginners build models without programming.
- Voice Assistant for Messaging App**
Developed a voice-based assistant that reads and translates messages across multiple languages using NLP and translation APIs, enabling hands-free communication.
- Photobooth Web Application**
Developed an interactive web app allowing users to upload images and generate customizable photo strips with themes and decorations. Implemented drag-and-drop image positioning, multiple strip styles, and download support using React

ACHIEVEMENTS & CERTIFICATIONS

- Runner-Up at GeekVishwa 2025 Hackathon (No-Code AI Model Training Platform).
- Published a research paper on Retail Demand Forecasting and Price Simulation.

RELEVANT COURSEWORK

- Core Courses:** Data Structures & Algorithms, DBMS, Operating Systems, Computer Networks, Android Development, Software Engineering.
